Abstract

- A web-based platform connecting candidates and recruiters for efficient recruitment. It supports job posting, job applications, shortlisting, and interview tracking.
- Saves time and simplifies recruitment.

Problem Statement & Objectives

- Problem: Recruitment activities are often scattered and difficult to track.
Objective 1: Centralize recruitment activities
Objective 2: Manage jobs and candidate profiles
Objective 3: Simplify applications and interviews
- Scope: Candidates, recruiters, jobs, applications and interviews.

Existing vs Proposed System

Feature	Existing System	Proposed System
Job Search	Manual	Centralized
Job Posting	Manual	Digital
Applications	Difficult	Easy tracking
Data	Scattered	Centralized
[Limitation / Gap]	Manual process & scattered data	Centralized digital recruitment platform

Feasibility Study

- Technical: FastAPI, MySQL, React
- Economic: Open-source technologies
- Operational: Easy recruitment management
- Schedule: Module-based development

Results & Testing

- Core recruitment features implemented and tested.
- Authentication, jobs, applications and interviews tested.

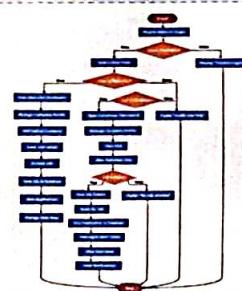

Conclusion

- Centralized recruitment platform developed.
- Simplifies recruitment and application management.

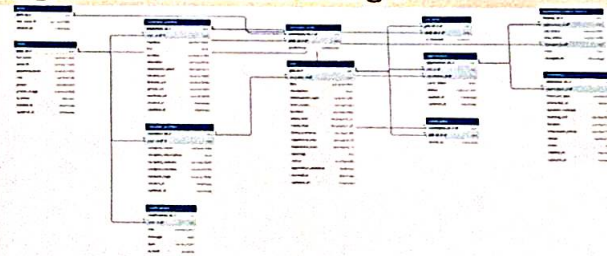

Tools & Technologies

- Front-End: React, JavaScript
- Back-End: Node.js, Express.js, REST API
Database: MySQL
- Tools: VS Code, Git, GitHub, MySQL Workbench

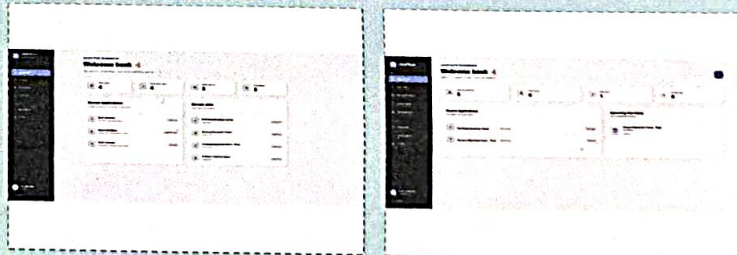

System Architecture

ER Diagram & Database Design

Future Scope

- AI-based candidate matching.
- Resume parsing and analytics.
